“In an era of AI hallucinations, black-box algorithms and widespread disinformation, Wikipedia’s radical transparency has become even more essential”, writes Dariuz Jemielniak.

# Who actually writes the stuff on Wikipedia pages

280,000 volunteer editors (the world's largest hobby group). They love arguing politely over facts.

Every fact needs verification. Even to say that the sky is blue, they look for about five sources.

part 1:
Visualisation of edits/revisions of articles happening across Wikipedia in real-time.

```
const stream = new EventSource('https://stream.wikimedia.org/v2/stream/recentchange');
// Listen for incoming edit events, which fetch() can't do.
stream.onmessage = (event) => { //triggers bang when new data received
  const data = JSON.parse(event.data); //data turns into json object
```

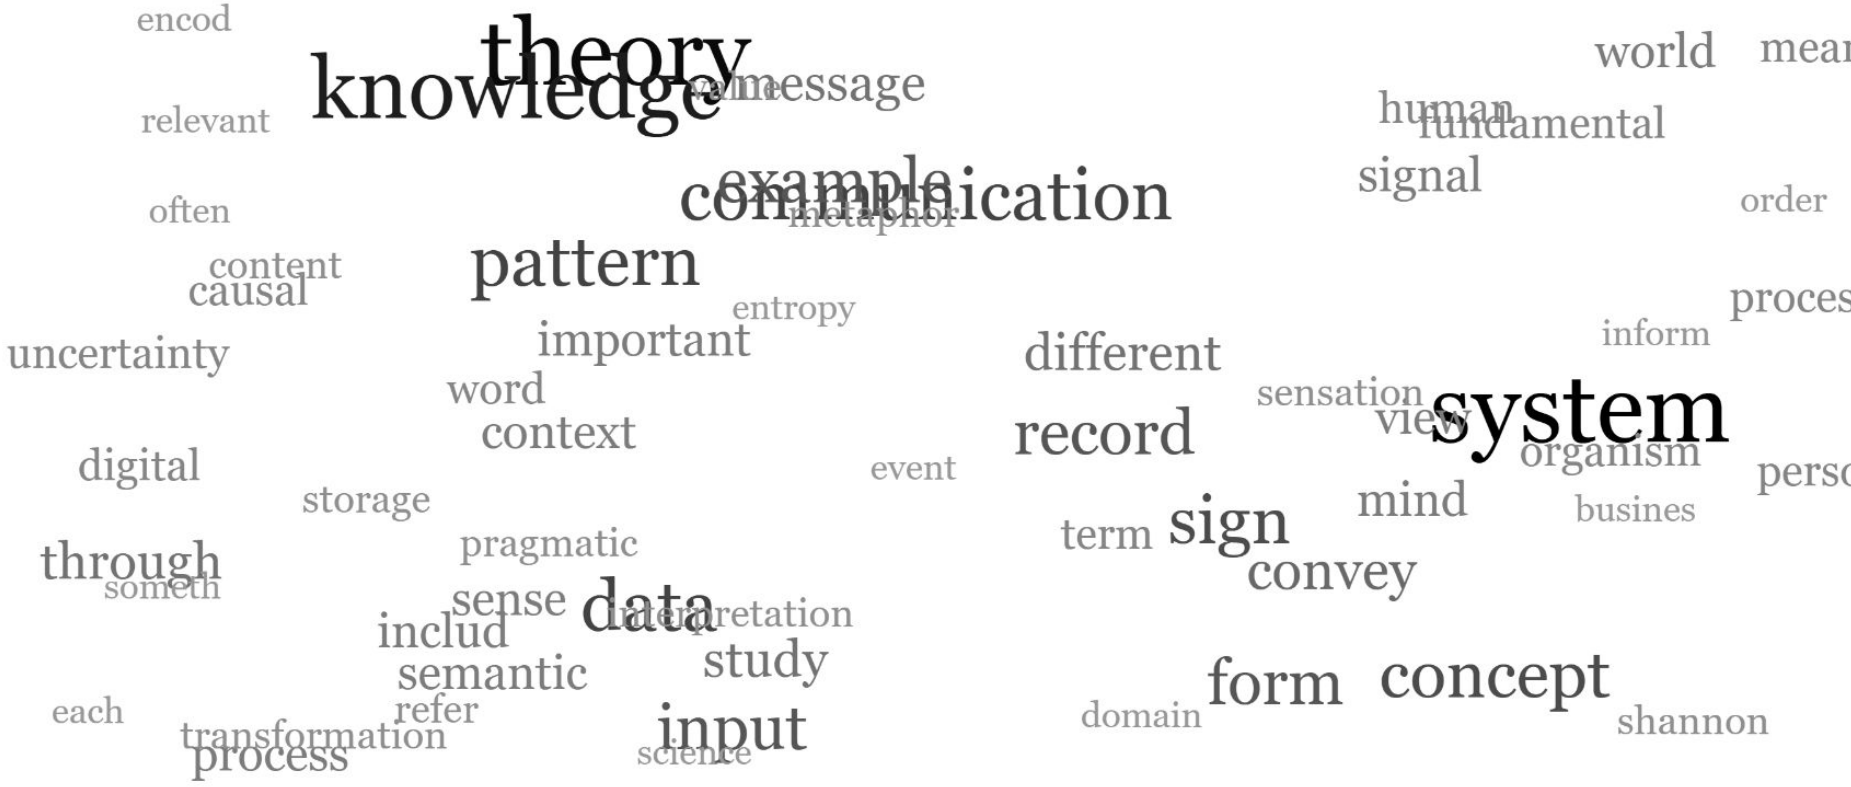
https://www.mediawiki.org/wiki/API

```
fetch(`https://en.wikipedia.org/api/rest_v1/page/s
  .then(r => r.json()) //turns response into json
  .then(summary => {    //summary is the json obje
    Articles.unshift({  //unshift adds new article
      title: data.title,
      image: summary.thumbnail ? summary.thumbnail
      summary: summary.extract,
      comment: data.comment,
      user: data.user,
      imgLoaded: false
    });
```

Media Wiki has many APIs for use

# part 2: Wordmap Generator

Information



"Information" — word map

Information

Information

Information technology

Information Age

Information and communications technology

Information security

textbox

suggestions

```
input = createInput('');
input.position(20, 20);
input.size(300);

input.input(() => {
  let term = input.value();

  keywords = [];
  if (term.length > 2) {
    fetchSuggestions(term);
  } else {
    suggestions = [];
  }
});
```

```
function fetchSuggestions(term) {
  fetch(`https://en.wikipedia.org/w/api.php?action=open
    .then(r => r.json())
    .then(data => {
      suggestions = data[1].map((title, i) => ({
        title: title,
        description: data[2][i],
        url: data[3][i]
      }));
    });
}
```

```
function fetchAnalyse(title) {
  fetch(`https://en.wikipedia.org/w/api.php?action=query&titles=${encodeUR
    .then(r => r.json())
    .then(data => {
      let pageId = Object.keys(data.query.pages)[0];
      let text = data.query.pages[pageId].extract;//
      keywords = getKeywords(text, 60, title); // limit number of top 60 w
      showingSuggestions = false; // hide suggestions, show word map
      suggestions = [];//
    });
}
```

To be rewritten with async after,  to make it cleaner

```
keywords.forEach(kw => {
  // bigger = more frequent
  let size = map(kw.count, 0, maxCount, 12, 72);

  // darker = more frequent
  let darkness = map(kw.count, 0, maxCount, 200, 0);
```

The more frequent the appearing words, the bolder and bigger

```
  text(kw.word, kw.x, kw.y)
```

```
x: random(100, width - 100),   // random position
y: random(100, height - 50)
```
